Profile

Computer Science student at UFAZ with a **98/100 GPA**, focused on backend and web development. Hands-on experience building Java/Spring Boot systems, working with databases and APIs, contributing to open source, and developing technology-driven startup projects. Interested in building reliable software that solves real-world problems.

Education

French-Azerbaijani University (UFAZ)

B.Sc. Computer Science — Dual Degree with University of Strasbourg

Baku, Azerbaijan

Expected June 2028

- **GPA: 98/100** | Coursework: Data Structures & Algorithms, OOP, Databases, Computer Architecture, Networks, Probability & Statistics.
- Scored **625/700** on Azerbaijan's State Examination Center university entrance examination.

Technical Skills

Languages: Java, Python, C/C++, TypeScript, JavaScript **Backend:** Spring Boot, Spring Security, REST APIs, WebSockets, JPA/Hibernate

Data & Storage: PostgreSQL, Redis, MongoDB, NumPy, Pandas, scikit-learn **Tools:** Docker, JUnit 5, Mockito, Testcontainers, Gradle, Maven, Git, Linux

Spoken: Azerbaijani (Native), Russian (Fluent), English (C1), French (Basic), German (Basic)

Selected Projects

RideFlow — Concurrent Ride-Matching Backend | Java, Spring Boot, PostgreSQL, Redis

GitHub

- Built a ride-hailing backend with authentication, fare estimation, driver matching, trip-state management, payments, and real-time updates.
- Used PostgreSQL as source of truth and Redis GEO for low-latency driver lookup; implemented concurrency-safe ride acceptance to prevent double assignment.

Seismic Event Detection — NASA Space Apps | Python, NumPy, Pandas, ML

GitHub

- Built a pipeline for detecting seismic events from noisy time-series data using signal preprocessing, denoising, and supervised machine-learning methods.
- Evaluated the trade-off between noise reduction and information loss caused by over-smoothing seismic signals.

Open-Source Experience

Testcontainers for Java — MongoDB Module | Java, JUnit 5, Docker, MongoDB

Open Source

- Added regression-test coverage for MongoDB initialization-script support using an integration test that launches a container and verifies created database content.
- Validated the contribution with targeted Gradle tests and the project's existing test infrastructure.

Leadership & Achievements

- **CCI OneIdea 2026 — SCAN Finalist:** Led development of a retail analytics concept that advanced from **200+ submitted ideas** to the final stage; currently developing a working version and exploring POS integration. [CCI OneIdea](#) | [GitHub](#).
- **OrchardGuard AI — Agrarian Innovation Center AI Bootcamp, Qusar:** Developed and presented an AI-based orchard risk and damage-assessment concept for early frost/hail warning and photo-based damage documentation. Presented before representatives of the **Qusar District Executive Authority**, the **Ministry of Agriculture of Azerbaijan**, and founders/executives from major agriculture-related companies, including **METAK**.
- **ICPC 2025–2026 National Qualification Round:** Represented UFAZ in competitive programming and algorithmic problem solving.
- **Azerbaijan National Mathematics & Physics Olympiads:** Advanced to national-level stages in mathematics and physics competitions.
